

HEALTH AND WELLBEING OUTCOMES REPORT

16TH JANUARY 2014

DEVON HEALTH AND WELLBEING BOARD

FULL VERSION

The Joint Health and Wellbeing Strategy has four priority areas and the selected indicators in this report align to these. Further to this, there are three types of indicators reflecting how the board will address the issue in question. These three types are:

Challenge Indicators – these cover areas where outcomes are poor, where inequalities are widening locally, or areas which are critical to future plans to improve health and wellbeing. The board will monitor these indicators and challenge current processes and practices in lead organisations in these areas.

Monitoring 'Watching Brief' Indicators – these cover areas where local outcomes are positive or where improvements have been made. The role of the board will be to monitor these indicators and intervene should outcomes deteriorate.

Commissioning Improvement Indicators – these are indicators for areas where joint working is required to improve outcomes and where the board will need to play a more active role in coordinating local commissioning.

Joint Health and Wellbeing Strategy indicators are set out in the grid on the next page, grouped against the four Joint Health and Wellbeing Strategy priorities and three indicator types. The outcomes framework they align to is identified within brackets. Given the remit of the board, the Public Health Outcomes Framework, Adult Social Care Outcomes Framework and NHS Outcomes Framework all figure prominently.

There are six main analyses in each individual indicator report:

South West Benchmarking – showing the position of Devon relative to other upper tier or unitary authorities in the South West, the South West rate and the national rate.

Local Authority District – highlighting differences within Devon between local authority districts.

Local Authority Comparator Group – showing Devon's position relative to the national family of peer authorities

Clinical Commissioning Group and Locality Comparison – highlighting differences within Devon between the Clinical Commissioning Groups and sub localities.

Trend and Future Trajectory – showing change over time on the selected indicator compared to the South West and England, and where available a future trajectory based on local targets or ambitions.

Inequalities – illustrating the extent of inequalities within Devon for the selected indicator. These will typically focus on social deprivation, but may relate to age, sex or other factors as appropriate.

Indicators which have been updated since the last report are marked as:

UPDATED INDICATOR

Any queries on this report should be directed to the Devon Public Health Intelligence Team at publichealthintelligence@devon.gov.uk

Priority Area Summaries

1. A Focus on Children and Families - Child poverty levels fell slightly between 2010 and 2011. Recorded levels of emotional development have improved substantially over recent years. Rates of smoking at delivery are falling over time and are amongst the lowest in the South West. Conception rates have fallen over time, particularly in more deprived areas. Admissions for self-harm for under 18s are above the national average.

2. Healthy Lifestyle Choices - Higher levels of physical activity are seen in Devon. Levels of excess weight in children are above average at age 4/5 and below average at age 10/11. Devon has relatively low levels of alcohol-related admissions. Adult smoking rates are similar to the national average.

3. Good Health and Wellbeing in Older Age - C-Diff incidence is above South West and national rates. Devon is below South West and national rates for the detection of dementia. Devon has lower levels of injuries due to falls. A higher proportion feel supported to manage their long-term term condition in Devon. Reablement service effectiveness is above average, but recorded coverage is low. Readmission rates are below average, but are increasing over time.

4. Strong and Supportive Communities - Suicide rates in Devon are consistent with the national average. There is a smaller gap in life expectancy between the most and least deprived communities in Devon. Self-reported wellbeing in Devon tends to be better than the national average. Lower levels of people reported as much social contact as they would like. Quality of life for carers in Devon was broadly in line with the national average. Devon had lower levels of people with learning disabilities in stable and appropriate accommodation than the national average, and similar rates for people with mental health issues.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 1: A Focus on Children and Families

Indicator: Children in Poverty

Period: 2011

UPDATED INDICATOR

Indicator Type	
Challenge	
Watching Brief	
Improvement	

Overview
 16,760 children (13.6%) in Devon live in households dependent on benefits or tax credits, compared with 16.2% in the South West and 20.6% nationally. Child poverty rates in Devon fell between 1999 and 2008 and have dropped further from the South West average over time. Rates increased in 2009 and 2010 before falling slightly in 2011. Rates at a district level range from 10.6% in East Devon to 16.8% in Torridge. Rates in the most deprived areas are five times those in the least.

Equalities
 Considerable variation exists across Devon communities. Rates of child poverty are higher in younger families due to higher benefit claimant rates and lower incomes in persons in their 20s and 30s. Single parent households, particularly where headed by a female, are also more likely to experience economic poverty, as are children of disabled parents. There are no significant variations by ethnic group in Devon.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 1: A Focus on Children and Families

Indicator: Smoking at Time of Delivery

Period: 2012-13

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview

In the year 2012-13, 718 mothers were smoking at time of delivery in Devon. This represents 9.9% of all mothers in Devon, compared with 13.3% in the South West, and 12.7% in England. Devon has one of the lowest smoking at time of delivery rates in the South West and the local authority comparator group. Within Devon the lowest rates were in East Devon (6.3%), and the highest in Torridge (13.2%). Rates have fallen over recent years.

Equalities

Whilst overall rates in Devon are the lowest in the South West, there is a strong inequalities gradient. Rates in the most deprived areas (25.7%) are almost five times higher than those in the least deprived areas (5.4%). Smoking at time of delivery varies by age with younger mothers in their teens and twenties much more likely to smoke than mothers in their thirties and forties.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

INDICATOR SPECIFICATION

Priority 1: A Focus on Children and Families

Indicator: Smoking at Time of Delivery

Period: 2012-13

Description	Number of women who currently smoke at time of delivery per 100 maternities.
Source	The Health and Social Care Information Centre, Lifestyle Statistics
Update Frequency	Quarterly - typically three months in arrears (Q1 2013-14 data was due October 2013, but delayed until late November 2013)
Outcomes Framework	Public Health Outcomes Framework Indicator 2.03
Detailed Specification	Number of women known to smoke at time of delivery. Numerator counts for areas are based on all women resident within the PCT's boundary known to smoke. Denominator counts for areas are based on all women resident within the PCT's boundary who gave birth in the period. Data collected from Health and Social Care Information Centre's return on Smoking Status At Time of Delivery. This information has been collected using the Health and Social Care Information Centre's (HSCIC's) Omnibus system, a web based system set up to collect performance and other central returns directly from the NHS.
Chart Notes South West	Compares Primary Care Trust areas in the South West Region. Error bar is 95% confidence interval.
Chart Notes Local Authority	Compares Local Authority Districts in the Devon County Council area. Error bar is 95% confidence interval.
Chart Notes Comparator	Compares Devon to similar upper tier / unitary local authorities using the 15 closest comparator councils from the Institute of Public Finance (IPF) statistical neighbours. Error bar is 95% confidence interval.
Chart Notes CCG/Locality	Rates are not currently available at a Clinical Commissioning Group and locality level.
Chart Notes Trend	Compares Devon rate with South West region and England over time.
Chart Notes Inequalities	Compares rates in the wards with the highest teenage conception areas with the Devon average.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 1: A Focus on Children and Families

Indicator: Teenage Conception Rate

Period: 2012 Q3 Rolling Year ***UPDATED INDICATOR***

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview
There were 342 conceptions in Devon between October 2011 and September 2012 for females aged under 18, with around half leading to a birth. The latest annual conception rate is 26.9 per 1,000 females compared with 25.7 for the South West and 28.7 for England. Rates above the national average are seen in Exeter. Rates have generally fallen over recent years, although greater reductions regionally and nationally mean the gap has reduced over time.

Equalities
There is a very clear link between area deprivation and teenage conception, with rates in the most deprived areas around four times higher than the least deprived areas both locally and nationally. Most teenage conceptions occur at the age of 17, and there are only a small proportion under the age of 16 (around 60 to 70 per annum), and less than 10 births per annum to under 16s.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Domain 2. Health Improvement

Indicator: Hospital Admissions for Self-Harm, Aged 0 to 17

Period: 2011-12

UPDATED INDICATOR

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview

There were 207 hospital admissions for self-harm in persons aged 0 to 17 in Devon in 2011-12. The rate per 100,000 in Devon was 147.1, which is above the South West (139.0), local authority comparator group (114.2) and England (115.5) rates. Admission rates increased from 141.1 in 2010-11 to 147.1 in 2011-12.

Equalities

Rates of hospital admission for self-harm are three times higher in females than males. Within the 0 to 17 age group admission rates increase with age and peak in those aged 15 to 17. Admission rates also tend to be higher in more deprived areas.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 2: Healthy Lifestyle Choices

Indicator: Proportion of Physically Active Adults

Period: 2012

Indicator Type	
Challenge	Challenge
Watching Brief	Watching Brief
Improvement	Improvement

Overview 59.5% of adults in Devon were physically active for at least 150 minutes per week in 2012. This is significantly above the South West (57.2%) and national rate (56.0%), but not significantly different to the local authority comparison group (58.1%) rate. Rates were significantly higher in the South Hams (63.4%) and Exeter (62.6%), although the differences at district level were not statistically significant. Due to a change in the reporting methodology trend data cannot currently be calculated.

Equalities Local breakdowns by deprivation or equality characteristics are not available. National results from the Active People survey highlight that physical activity rates are higher in less deprived areas and professional groups. Participation is also higher in males and younger age groups. There are no significant differences by ethnicity. Activity rates are significantly lower in people with limiting long-term

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 2: Healthy Lifestyle Choices

Indicator: Excess Weight in Four / Five Year Olds

Period: 2012-13 (School Year) ***UPDATED INDICATOR***

Indicator Type	
Challenge	
Watching Brief	
Improvement	

Overview
This measure of 'excess weight' covers children classified as overweight or very overweight. In reception year (aged four or five) 24.9% of pupils in Devon were recorded in the excess weight category, which was significantly above the South West (22.9%), local authority comparator group (21.8%) and England (22.2%) rates. Within Devon, Torrridge (27.4%), Teignbridge (27.1%), and Exeter (26.2%) were significantly above the national rate. Rates have increased on 2011-12 levels.

Equalities
Local results by deprivation and other criteria have not yet been released. Previous results for Devon that whilst obesity rates were significantly higher in more deprived areas, the difference for the combined excess weight were not statistically significant. Levels of excess weight were higher in boys than girls. No significant differences were observed by ethnic group in Devon.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 2: Healthy Lifestyle Choices

Indicator: Alcohol-Related Admissions

Period: 2012-13 (provisional)

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview

There were around 17,715 alcohol-related admissions to hospital for Devon residents in 2012-13. The Direct Age Standardised Rate of Admissions (1,676.4 per 100,000) is below the South West and national rate. Rates within Devon are highest in Northern Devon. Admission rates are significantly higher in more deprived areas.

Equalities

Alcohol-Related Admission rates vary by age, with the highest rates in older age groups, reflecting the long-term effects of alcohol-use through life. Acute admissions (accidents and poisonings) are most common in young adults, mental health admissions in persons in their 40s and 50s, and admissions for chronic conditions in older age groups. Admission rates are higher for males than females.

Indicator: Alcohol-Related Admissions

Period: 2012-13 (provisional)

Description	Direct age-standardised rate of alcohol-related admissions per 100,000 population.
Source	North West Public Health Observatory (South West Benchmarking, Local Authority District, Trend and Local Authority Comparator Group). Devon Public Health Intelligence Team (Inequalities and CCG / Locality Comparison)
Update Frequency	Quarterly - six months in arrears. Annually - nine months in arrears (final 2012-13 due January 2014). Local data feeds two months in arrears.
Outcomes Framework	Public Health Outcomes Framework Indicator 2.18 (updated specification due soon)
Detailed Specification	Admissions to hospital where the primary diagnosis or any of the secondary diagnoses within the admission episode contain an alcohol-attributable condition for the year 2011-12. Admissions of children under 16 were only included if they had an alcohol-specific diagnosis i.e. where the attributable fraction = 1, meaning that the admission is treated as being wholly attributable to alcohol. For other conditions, estimates of the alcohol-attributable fraction were not available for children. A detailed definition of the numerator data used for this indicator can be found at: www.lape.org.uk/downloads/Lape_guidance_and_methods.pdf
Chart Notes South West	Compares Primary Care Trusts in the South West Region. Will be changed to upper tier / unitary local authority analysis in 2013-14. Error bar is 95% confidence interval.
Chart Notes Local Authority	Compares Local Authority Districts in the Devon County Council area. Error bar is 95% confidence interval.
Chart Notes Comparator	Compares Devon to similar upper tier / unitary local authorities using the 15 closest comparator councils from the Institute of Public Finance (IPF) statistical neighbours. Error bar is 95% confidence interval.
Chart Notes CCG/Locality	Displays rates for the two Clinical Commissioning Groups in the wider Devon area, their localities, and their sub-localities. This is based on the GP registered population and rates tend to be lower than local authority totals due to higher admission rates in the unregistered population. Error bar is 95% confidence interval.
Chart Notes Trend	Compares Devon rate with South West region and England over time. Trajectory is based on JHWS ambition of growth below national rate (3% per annum).
Chart Notes Inequalities	Compares areas within Devon based on area deprivation. National deprivation quintiles from the 2010 Indices of Deprivation (Index of Multiple Deprivation) used.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 2: Healthy Lifestyle Choices

Indicator: Adult Smoking Prevalence

Period: 2011-12

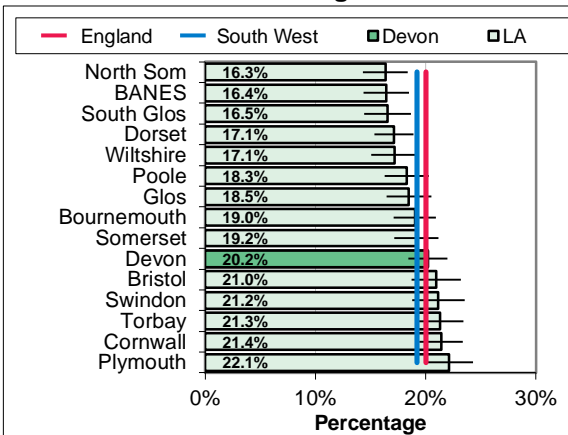

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview
The latest figures from the Integrated Household Survey suggest that 20.2% of the adult population in Devon smoke. This is slightly higher than the South West (19.2%), local authority comparator group (19.0%) and England rate (20.0%). This is also above the 2009-10 (18.5%) and 2010-11 (18.1%) although the difference is not statistically significant due to a relatively small sample size. Variations observed at a local authority district level were not statistically significant.

Equalities
Smoking rates in Devon are higher in people working in routine and manual occupations (34.4%). Levels of smoking are highest in the 16 to 29 age group, and are higher in males than females, although it should be noted that rates have been slower to fall in females. Adults smoking in the household greatly increases the likelihood of children taking up smoking at age 16.

Priority 2: Healthy Lifestyle Choices

Indicator: Under 75 Mortality Rate - All Cancers

Period: 2010-12

UPDATED INDICATOR

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview In 2012, there were 1,058 deaths due to cancer in under 75s, with an direct age standardised rate of 96.8 per 100,000 for 2010-12. The Devon rate in 2010-12 was below the South West (100.0) and England (106.7) rates. Within the county, rates are highest in Exeter (110.2). Mortality rates by year have fallen from 130.1 per 100,000 in 1993 to 103.1 in 2012. Mortality rates are higher in more deprived areas, although the health inequality gap has decreased over the last 10 years.

Equalities Mortality from cancer increases rapidly with age, with the highest mortality rates in under 75s in the 65 to 74 age group. Mortality rates from cancer are around 20% higher in males than females in England. In terms of ethnicity, Cancer Research UK suggests higher mortality rates in white groups, although survival rates for breast cancer are lower in Asian and Black ethnic groups.

Priority 2: Healthy Lifestyle Choices

Indicator: Under 75 Mortality Rate - All Circulatory Diseases

Period: 2010-12

UPDATED INDICATOR

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview In 2012, there were 455 circulatory deaths in under 75s, with an direct age standardised rate of 44.9 per 100,000 for 2010-12. The Devon rate in 2010-12 was below the South West (49.0) and England (58.6) rates. Within the county, rates are highest in Exeter and Northern Devon. Mortality rates by year have fallen from 122.6 per 100,000 in 1993 to 42.9 in 2012. Whilst rates have fallen more quickly in areas of above average deprivation, the gap persisted for those in the most deprived

Equalities Mortality from circulatory disease increases rapidly with age, with the highest mortality rates in under 75s in the 65 to 74 age group, and very few deaths in persons aged under 40. In Devon mortality rates are 2.5 times higher in males than females. In terms of ethnicity, the British Heart Foundation highlight that whilst risks did not vary considerably by ethnic group for females, white males were at higher

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Incidence of Clostridium Difficile

Period: 2012-13

Indicator Type	
■	Challenge
■	Watching Brief
■	Improvement

Overview There were 263 cases of Clostridium Difficile in 2012-13 in Devon. The incidence rate per 100,000 in Devon (35.2) was above the South West (30.2), nearest neighbour (28.6) and England (27.7) rates. Reporting processes for Clostridium Difficile in 2012-13 were standardised allowing for more accurate comparison. This explains the drop seen locally between 2011-12 and 2012-13, although it should be noted that infection rates have reduced over time.

Equalities Incidence of Clostridium Difficile increases significantly with age, with a rate of 9.7 per 100,000 in those aged 40 to 59 compared to 282.0 per 100,000 for those aged 80 and over. This is a consequence of higher hospital admissions in these age groups, a greater likelihood of living in a communal establishment (care homes) and poorer general health. Rates are also higher in females and in more deprived areas.

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Injuries Due to Falls

Period: 2012-13

Indicator Type	
Challenge	Challenge
Watching Brief	Watching Brief
Improvement	Improvement

Overview There were 3,260 admissions due to falls in 2012-13 in Devon for people aged 65 and over. The age standardised rate per 100,000 was 1348.9 in Devon, which is below the South West (1446.5), local authority comparator group (1419.1) and England (1664.8) rates. The rate in Devon is the second lowest in the South West. Within Devon rates were significantly lower in Mid Devon (1119.9). Whilst rates increased between 2007-08 and 2010-11 they have stabilised in recent years.

Equalities Age standardised admission rates have remained consistently higher in the most deprived deprivation quintile. Whilst the gap narrowed in 2012-13, the rate in the most deprived areas (1703.2) was still 47% higher than the least deprived areas (1161.2). Rates increase sharply with age with an age-specific rate of 477.1 for persons aged 65 to 69, compared with 6165.7 for those aged 85 and over.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Dementia Diagnosis Rate

Period: 2011-12

Indicator Type	
Challenge	Challenge
Watching Brief	Watching Brief
Improvement	Improvement

Overview In 2011-12, 4,848 people in Devon were on a GP register for dementia, compared with an expected prevalence of 13,075, this is a diagnosis rate of 37.1%. This is the third lowest ratio in the South West, and is below the South West (42.6%) and England (45.0%) rates. Diagnosis rates have improved in recent years, increasing from 28.0% in 2006-07, however national ratios have increased at the same rate. The highest rates in Devon are seen in Teignbridge (42.8%) and Torridge (41.4%).

Equalities There are no significant differences in Devon based on area deprivation. Dementia prevalence rates are higher in females. This, coupled with longer life expectancy, means females with dementia outnumber males by more than two to one. Prevalence rates for dementia increase rapidly with age, with one in 1400 affected under the age of 65, compared with more than one in five in those aged 85 and

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Feel Supported to Manage Own Condition

Period: 2013-14 Q1-Q2

UPDATED INDICATOR

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview

In Devon between January and September 2013, 68.1% of people with a long-term condition in the GP survey, felt they had enough support to manage their own condition. This is significantly higher than the national (64.0%), South West (66.1%) and local authority comparator group (64.7%). Rates in NEW Devon CCG (67.2%) and South Devon and Torbay CCG (67.9%) were similar, and highest in the Moor-to-Sea locality (71.7%). Rates have also increased slightly on 2012-13 levels.

Equalities

There was no clear relationship between feeling supported to manage their own condition and deprivation. National results reveal the older age groups (85 and over, 69.2%) feel better supported than younger age groups (18 to 24, 59.2%), males (65.6%) feel better supported than females (62.4%), and minority ethnic groups feel less well supported.

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Re-ablement Services (Effectiveness)

Period: 2012-13

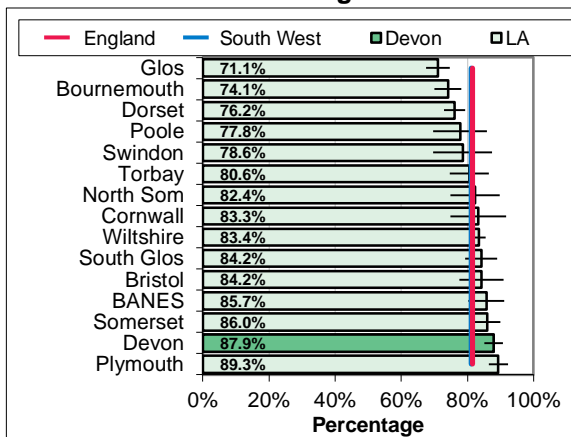

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview In 2010 Devon implemented a countywide in-house social care re-ablement service for older people. The service works with people who would normally receive long-term personal care to get back on their feet as quickly as possible and help them to stay independent for longer. In 2012-13, reablement services were effective for 87% of older people who received the service in Devon, compared with 81% in the South West and 81% nationally.

Equalities There is no significant link between effectiveness of reablement services and deprivation levels in Devon.

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Readmissions to Hospital Within 30 Days

Period: 2011-12

UPDATED INDICATOR

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview
In Devon in 2010-11, 10.29% of patients discharged after an emergency admission were readmitted within 30 days. This is significantly below the South West (10.93%), local authority comparator group (10.95%) and England (11.78%) rates. The rate in Devon was the third lowest in the South West and the lowest in the local authority comparator group. Exeter (11.72%) had a readmission rate above the South West and Devon rate. Readmission rates have increased over time, but

Equalities
There is no local data currently available on the pattern by deprivation, age, sex and other factors, although reports are in development. National data highlights higher readmission rates in more deprived areas, ranging from 13.05% in the most deprived group to 10.53% in the least deprived group. Readmission rates are higher amongst males (12.13%, compared with 11.46% for females).

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

INDICATOR SPECIFICATION

Priority 3: Good Health and Wellbeing in Older Age

Indicator: Readmissions to Hospital Within 30 Days

Period: 2011-12

Description	Percentage of emergency admissions occurring within 30 days of the last, previous discharge after admission
Source	Health and Social Care Information Centre (Hospital Episode Statistics (HES) and the Compendium of population health indicators)
Update Frequency	Annually, around 20 months in arrears (2012-13 due December 2014), more timely local performance reporting currently being developed by NEW Devon CCG Business Intelligence Team
Outcomes Framework	NHS Outcomes Framework Indicator 3b, Public Health Outcomes Framework Indicator 4.11
Detailed Specification	Percentage of emergency admissions occurring within 30 days of the last, previous discharge after admission, Indirectly standardised rate (excludes cancer and obstetrics)
Chart Notes South West	Compares Former Primary Care Trusts in the South West Region. Error bar is 95% confidence interval.
Chart Notes Local Authority	Compares Local Authority Districts in the Devon County Council area. Error bar is 95% confidence interval.
Chart Notes Comparator	Compares Devon to similar upper tier / unitary local authorities using the 15 closest comparator councils from the Institute of Public Finance (IPF) statistical neighbours. Error bar is 95% confidence interval.
Chart Notes CCG/Locality	Rates are not currently available at a Clinical Commissioning Group and locality level.
Chart Notes Trend	Compares Devon rate with South West region and England over time.
Chart Notes Inequalities	Rates cannot currently be calculated at a local level as this is a new survey with no previous trend information available.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Suicide Rate

Period: 2011

Indicator Type	
Challenge	
Watching Brief	
Improvement	

Overview In 2011, 76 deaths were registered as suicide or injury undetermined (open verdict), with a direct age standardised rate of 8.2 per 100,000. The Devon rate in 2010 was above the national rate but below the South West rate. Within the county, rates are similar between districts, with no significantly higher rates. Whilst year-on-year variations are seen, mostly due to the relatively small numbers involved, rates in Devon have typically remained around or slightly above the national rate.

Equalities There are no significant differences in suicide rates based on area deprivation in Devon. Differences by sex are notable, and tend to be low and stable for females (around 4 per 100,000) and higher and more variable in males. Suicide rates are highest for people in the 40s and 50s and are relatively low for persons in their teens and 20s.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Male Life Expectancy Gap

Period: 2009 to 2011

UPDATED INDICATOR

Indicator Type	
Challenge	Challenge
Watching Brief	Watching Brief
Improvement	Improvement

Overview
The Slope Index of Inequality compares life expectancy in the most deprived and least deprived communities within an area's population, revealing the gap in life expectancy in years. For males in Devon the gap is 5.5 years which is significantly lower than the gaps for the South West (7.1), the local authority comparator group (7.2), and England (8.7). Gaps were significantly below the national average in East Devon, Mid Devon, the South Hams and Torridge. The gap has increased slightly.

Equalities
As the slope index of inequality compare the most and least deprived 10% of a defined area, the smaller gap seen is partly a product of less severe social inequalities compared to other areas. The gap is more notable at the extremes with a 12.5 year gap in life expectancy at an electoral ward level. The life expectancy gap is much larger for males than females.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Female Life Expectancy Gap

Period: 2009 to 2011

UPDATED INDICATOR

Indicator Type	
Challenge	
Watching Brief	
Improvement	

Overview
The Slope Index of Inequality compares life expectancy in the most deprived and least deprived communities within an area's population, revealing the gap in life expectancy in years. For females in Devon the gap is 3.4 years which is lower than the gaps for the South West (4.8), the local authority comparator group (5.4), and England (6.4). The gap was also significantly below the national average in East Devon. The gap has decreased slightly over time.

Equalities
As the slope index of inequality compare the most and least deprived 10% of a defined area, the smaller gap seen is partly a product of less severe social inequalities compared to other areas. The gap is more notable at the extremes with a 12.5 year gap in life expectancy at an electoral ward level. The life expectancy gap is much larger for males than females.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Self-Reported Wellbeing (low happiness score %)

Period: 2012-13

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview	Low happiness score is one of four self-reported wellbeing measures in the Public Health Outcomes Framework, with others covering life satisfaction, feeling worthwhile and anxiety. Within Devon, 26.7% of the population had a low happiness score on the index compared with 27.7% for the South West, 27.3% in the local authority comparator group and 28.7% in England overall.
-----------------	---

Equalities	No local information is available based on area deprivation or other characteristics. National findings highlight that self-reported wellbeing tends to be poorer in more deprived areas. There is a notable pattern by age with younger people and older people with higher levels of wellbeing than people in their 40s and 50s (known as the U shaped curve of happiness).

Indicator: Self-Reported Wellbeing

Period: 2012-13

Description	Self-reported well-being - percentage of people with a low happiness score
Source	Office for National Statistics Integrated Household Survey. Experimental Statistics from 2011 onwards.
Update Frequency	Annually, six to eight months in arrears (2013/14 update due Autumn 2014)
Outcomes Framework	Public Health Outcomes Framework Indicator 2.23iii
Detailed Specification	The percentage of respondents who answered 0-6 to the question "Overall, how happy did you feel yesterday?" ONS are currently measuring individual/subjective well-being based on four questions included on the Integrated Household Survey. Responses are given on a scale of 0-10 (where 0 is "not at all happy" and 10 is "completely happy") The first full year data from these questions was published by ONS in July 2012 and are being treated as experimental statistics. In the ONS report, the percentage of people scoring 0-6 and 7-10 have been calculated for this indicator.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Social Contentedness

Period: 2012-13

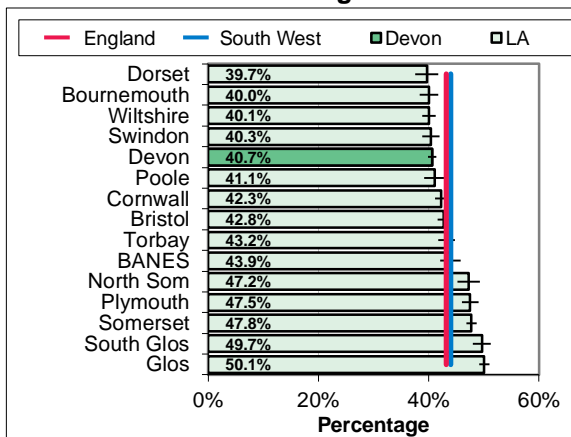

Indicator Type

	Challenge
	Watching Brief
	Improvement

Overview 41% of social care users surveyed in Devon in 2012-13 reported being satisfied with their social situation, this is slightly below the south west and national response at 43% and 44% respectively. Within Devon whilst there is some variation in responses at district level, smaller sample sizes mean the differences are not statistically significant.

Equalities Social care users living in the more deprived areas reported lower levels of social isolation. Female social care users in Devon reported being more satisfied with their social situation than male social care users. Social care users with Learning Disabilities reported being the most satisfied with their level of social contact compared with other client groups.

Priority 4: Strong and Supportive Communities

Indicator: Carer Reported Quality of Life

Period: 2012-13

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview	This measure gives an overarching view of the quality of life of carers based on outcomes identified through research by the Personal Social Services Research Unit. This is the only current measure related to quality of life for carers available, and supports a number of the most important outcomes identified by carers themselves to which adult social care contributes. The carer reported quality of life in Devon is in line with both the South West and national average.

Period: 2012-13

Description	Carer Reported Quality of Life
Source	Carers Survey. National Adult Social Care Intelligence Service (SW Benchmarking, Trend and Comparator Group) DCC Management Information Team (Local Authority District, Inequalities and CCG / Locality Comparison)
Update Frequency	Bi-annually, around four months in arrears after year end. 2014-15 due July 2015.
Outcomes Framework	Adult Social Care Outcomes Framework Indicator 1D
Detailed Specification	This is a composite measure which combines individual responses to six questions measuring different outcomes related to overall quality of life. These outcomes are mapped to six domains (occupation, control, personal care, safety, social participation and encouragement and support). Responses to the questions indicate whether the carer has unmet needs in any of the six areas. The measure gives an overall score based on respondents' self-reported quality of life across the six questions. All six questions are given equal weight.

DEVON HEALTH AND WELLBEING OUTCOMES REPORT

Priority 4: Strong and Supportive Communities

Indicator: Stable/Appropriate Accommodation (Learning Dis.)

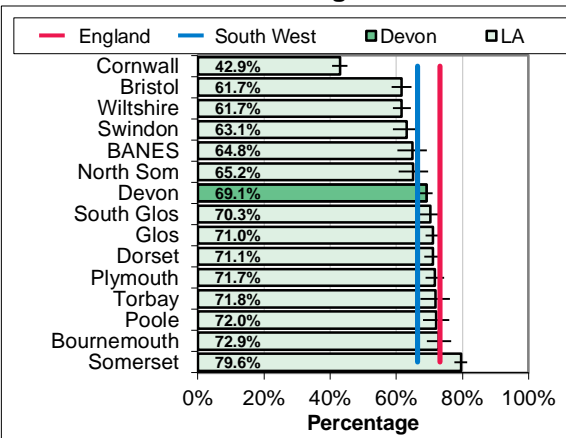

Period: 2012-13

Indicator Type	
	Challenge
	Watching Brief
	Improvement

Overview
The nature of accommodation for people with learning disabilities has a strong impact on their safety and overall quality of life and the risk of social exclusion. In 2012-13 69% of adults with a learning disability in Devon (known to the council) were living in their own home or with their family, compared with 66% in the South West and 73% nationally. This varied within Devon from 62% in Teignbridge to 84% in North Devon.

Equalities
There are no significant differences in Devon based on area deprivation. A higher proportion of younger adults (18-30) with a learning disability are in stable and suitable accommodation in Devon, compared to 31-64 year olds.
