INDEX OF MULTIPLE DEPRIVATION

The English Indices of Deprivation measures relative levels of deprivation in small areas of England called Lower Super Output Areas (LSOAs). The overall measure is called the Index of Multiple Deprivation. This produces an IMD score (bar chart below showing score in 2010) and a national rank out of 32482 LSOAs (trend in national rank shown in line chart below). Deprivation and health are closely connected, with areas with higher levels of deprivation tending to experience poorer health outcomes. Reducing social inequalities in health is a major focus of the work of Public Health teams.

INDICES OF DEPRIVATION DOMAINS

The Indices of Deprivation are comprised of an overall Index of Multiple Deprivation (IMD); seven domains which contribute to the overall index covering income, employment, health, education, barriers to housing and services, crime and living environment; and two supplementary indices relating to income deprivation in children (under 16) and older people (60+).

The following chart compares an area's national rank on the IMD, seven domain and two supplementary indices in 2004, 2007 and 2010, illustrated below by circles of increasing darkness. The value axis ranges from the most deprived LSOA in the country (1) to the least deprived LSOA in the country (32482) on a given measure, and the chart is further divided into five sections highlighting the national deprivation group (quintile). This gives an indicator of the area's relative position nationally and how this has changed over time.
